Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Software Developer Back-End C#, .NET position at LVM Tech. The opportunity to contribute to a cloud-native Transportation Management System in its final stages, offering significant impact from day one, is exceptionally appealing. Your focus on autonomy, rapid feedback, and tangible results perfectly aligns with my passion for delivering high-quality, impactful software.

My experience closely matches the requirements outlined. For instance, my background includes several projects where I designed, developed, and tested software solutions. My experience with C++ in building a tire-pressure system via HAL + AIDL with sub-second alerts and 99% reliability demonstrates my ability to deliver reliable solutions. Furthermore, I have a strong understanding of API design and data management; my experience with React analytics platforms, including building REST/JSON APIs, and SQL query optimization, as demonstrated in my real-time analytics platform, aligns perfectly with the required skills. My work automating PR validation pipelines with n8n and GitHub Actions has also given me experience working with CI/CD pipelines.

I am eager to contribute my skills to LVM Tech and to learn from senior developers. I am a quick learner, self-motivated, and committed to delivering results. I am confident that my technical skills, systems thinking, and dedication to SDLC best practices will make me a valuable asset to your team.
